IMY 220
Project Progress:
Deliverable 2

Due: Friday 2 October @ 09:30

The submission instructions are available on ClickUP. Any deviation from these instructions will cause a 10% deduction from your mark.

Instructions

- Implement the login and post creation functionality for your project.
- This deliverable only deals with the HTML, CSS, PHP, and SQL aspects of your project. You do not need to do any JavaScript, jQuery, JSON, or AJAX for this deliverable.
- The focus of this deliverable is to start working on the visual design of your project. This includes choosing fonts, colour schemes as well as any important visual elements that will guide the visual design of your final project. This will also count the most marks for this deliverable.

Part 1: Posts

Add more functionality with regards to adding and viewing posts on the website. This must include being able to upload and display an image for the post and being able to access a post's page (refer to Practical 2 as a guideline for how to create post pages). You should also finalise the functionality for adding comments to a post, including limiting the amount of comments in the activity feed and showing them in the post's page.

You must also finalise the interface for adding hashtags and reporting posts, although you may still use placeholder functionality for this.

Part 2: Albums

Create the basic functionality for creating and viewing albums. Users should be able to create albums, add a name and description, and add photos.

You must also finalise the interface for adding hashtags, adding friends to albums, and making albums private, although you may still use placeholder functionality for this.

Part 3: Profile Page

Create the functionality for being able to view users' profile pages (refer to Practical 2 as a guideline for how to create profile pages). These should display all relevant user information as listed in the specification and a user should be able to edit their own information in a logical manner. A user's posts and albums must also be visible on their profile page, which must display in a logical manner according to the specification.

You must also finalise the interface for adding followers and friends and for sending messages, although you may still use placeholder functionality for this.

Bonus

You will receive bonus marks for any extra functionality, such as finalising the functionality for hashtags, reporting posts, friend/follower functionality, etc.

Visual design requirements

- #1: Be creative!
- **Everything** must be styled, i.e. your profile page, your posts pages, your album pages, etc.
  - You will lose marks if any of the required functionality/pages do not have styling that is consistent with your overall visual theme/design.
  - You will lose marks if there is any default Bootstrap visible in your forms or newsfeed.

Additional Information

- You must upload to **imy.up.ac.za.** Server details are available on ClickUP.
- All the files that you upload to the server **must also be submitted on ClickUP** according to the submission instructions in the spec. That means that your database must also be exported and included in your submission.

Submit all the files for this deliverable on the IMY server and ClickUP.
